Conor

Per your request, attached is a spreadsheet with state plane coordinates (easting and northing) listed for the items/locations you identified. The former plating room coordinates correspond to the 4 corners of the former plating room and do not necessarily correspond to the limits of the historical excavation, however soil excavation activities did occur within the plating room. According to the RFI dated June 1994, the work activities were completed by Environmental Remedial Action Division of Chemical Waste Management, work was initiated in May 1985, the excavation extended to a maximum depth of 9 feet BLS, and a total of 443.31 tons of soil and 128.57 tons of concrete were removed and disposed at Adams Center Landfill located in Fort Wayne, IN.

We will send you a map with the approximate property line later this AM. Please let me know if you need anything else or have questions.

Sincerely,

Bradley E. Gentry, LPG

Thank you, Brad. Could you also provide a map with the property boundary displayed on it? I'm thinking a google earth .kmz file to show the imagery, too.

I'm available all day other than 3-4 Central time if you'd like to talk.

Thank you,

Conor

Conor

Yes, I should be able to get you most of this information tomorrow or Wednesday at the latest. I will contact you tomorrow about this request once our CADD person gets into the office, which will likely be mid to late morning tomorrow.

Sincerely,

Brad,

I am working on making maps for this Friday's public meeting and am wondering if you can provide coordinates or location information for the following features:

- RWs 1 through 5
- IT-2, IT-3, MW-12R, MW-20, MW-22, MW-28, MW-29, and MW-30 (the wells in the semi-annual monitoring program)
- Air sample points from last week's sampling event, including the location of the treatment system's vent stack
- Previous soil excavation under the plating room (~1995)
- Locations of the new and old sewer lines

Thank you for your help. I'm available to answer questions if you have any.
 Conor
